

Credentials for Mike Donoho, Mayor's appointee to the Board of Zoning Appeals

During my 30 plus years in the land planning and development industry I have gained a diverse level of experience in design, civil site engineering, master planning, client and public relations, permitting, feasibility studies, ADA compliance reviews and the development of standards and prototypes for national retail, restaurant and hotel chains such as Dollar General, Cracker Barrel Old Country Store, Logan's Roadhouse, Buffalo Wild Wings, O'Charley's and a number of hotel chains.

I have also worked in industrial and residential master planning as well as hospital, correctional and educational facilities design. My work in master planning, infrastructure design, development and construction observation allows me to envision the needs of multi-phase projects.

My skills include working with city, county and federal agencies along with corporate clients, developers, architects and other engineers to ensure the timely completion of projects. I have designed and permitted projects from South Florida to South Portland, Maine and as far West as El Paso, Texas which gives me the experience required to anticipate and overcome any issues that may arise during the design, permitting and construction process.

Currently I am a Project Manager with Collier Engineering Company, Inc. My responsibilities include providing Conceptual Design through Certificate of Completion for State, Local and County Governments, as well as private clients. The development of standards and prototypes, site investigation reports, feasibility studies, construction documents, calculations for stormwater detention/retention, water quality, opinion of probable cost, erosion and sediment control and the public extension or relocation of utilities as required.

My Volunteer Experience Includes:

Franklin Development Approval Process Task Force, City of Franklin

Worked with City of Franklin and a team of developers, engineers and architects on a new approval process to help stream line the permitting of new development.
